PREFACE

The present bibliography contains nearly 200 selected references on health services published chiefly during 1940-1972. The references listed in the bibliography are by no means definitive nor are they meant to be, but they represent many of the old and current publications which may be used as guides for further research. The bibliography is divided into two parts: Part One contains the listing of books and monographs in that area and Part Two is a listing of articles appearing in the public health periodicals. The listings are arranged by the author in alphabetical order when possible.

I would especially like to thank Mrs. Hershel Marks for typing the bibliography and Mrs. Mary Vance, Editor, Council of Planning Librarians, for her encouragement and partial financial support for the completion of the bibliography

It is my hope that those engaged in various aspects of health services research will find this bibliography a useful and informative instrument.
